

Acclimation Procedures

1. Float unopened bags in your tank for 15-20 minutes, to equalize temperature.
2. Open bags and put 1 cup of your tank water every 10 minutes, until volume of water in bag is doubled.
3. To release the fish, empty the bag into a fish net over a bucket or the sink. Then gently place the fish in your system.

Never empty the bag into your aquarium, you want to discard the water in the bag!
